Warranty:
2 years

Summary ↗

> QD218 series frequency inverter has compact structure and excellent performance, which is one specially designed for engineering machinery load. With our QD218 series products, it could help our customer to evidently improve the production efficiency.

The equipment strictly follow the related international standards such as IEC/EN61800-3, IEC/EN61000-4, IEC/EN60721-3, IEC/EN61800-5-1 and so on.

Characteristics ↗

Electronics units are all reliable brands which could serve 10 years.

Built-in DC reactor (37kw~500kw) to reduce input current harmonics content (40%) and improve power factor (0.96). Normally without DC reactor, the input current harmonics content is around 80%~100% and related power factor is 0.6.

Built-in harmonics filter to reduce the interference of radio and conduction to other equipment.

Evident energy saving effect with energy saving mode. The frequency inverter will check the real load and automatically regulate the voltage and current upon the motor to realize the evident energy saving effect.

PCB has adopted thickened three anti-paint protection to improve reliability in harsh environments with high moisture, high dust and high anti-fungal properties.

LCD Display keypad (Optional accessory)

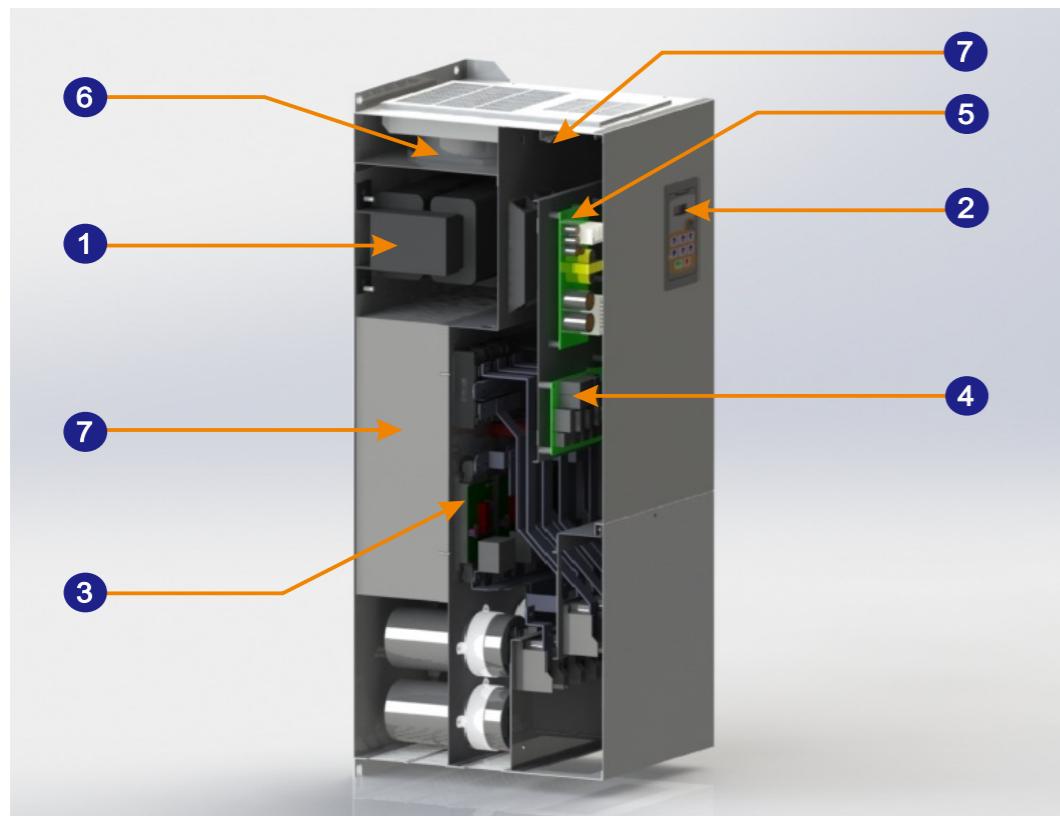

Through advanced flux and speed estimation technology, the equipment could realize flux current and torque current decoupling control to improve the low torque and guarantee 150% starting torque at 0.5Hz.

The overall structure adopts the book design

We promise to apply imported famous & reliable electronics units with partial list for your reference as below:

Key electronics units	Brand	Origin
IGBT	Infineon, Fuji	Germany/Japan
Hall sensor	LEM	Switzerland
Electrolytic capacitors	Epcos	Germany
Fan	Delta	Taiwan

Reliable Hardware Structure

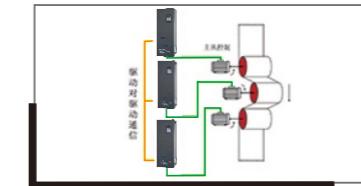

- ① Integrated DC reactor efficiently improves power factor, greatly reduce current distortion, reduce input current value and improve the product stability.
- ② Clear LED display to quickly adjust the guide with parameter data upload and download function. It could be installed on the cabinet gate or hold on hand to operate.
- ③ The latest generation IGBT technology to low down the energy consuming with better characteristics and better short circuit withstand capability.
- ④ Integrated C3 harmonics filter could efficiently limit electromagnetic interference which could help the equipment apply to all kinds of industrial environments and greatly low down the interference to other equipments on the site.
- ⑤ High standard & excellent quality units and thickened painting PCB has efficiently improved the product reliability to ensure safe running in the worst environment.
- ⑥ Long service term, low noise, excellent efficiency and detachable fan design to ensure safe running of the system and make clean and replacement easier.
- ⑦ Unique dual duct design: Power cell and control unit separately carry out cooling job to improve the equipment reliability and support parallel installation.

Rich hardware configuration

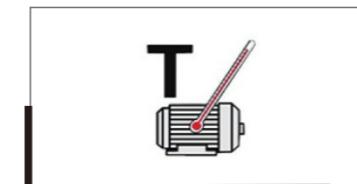

> Standard Modbus communication will make PLC system integration easier.

> Standard RS485 communication port could realize drive-to-drive communication .

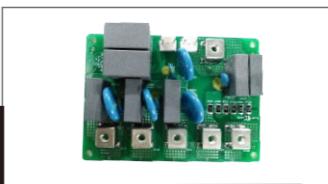

> Standard DC reactor to improve power factor and reduce input current harmonics.

> NTC/PTC motor heat protection terminals could guarantee the motor to run safely.

> LCD Display keypad could directly replace LED keypad. This is one option for our customers.

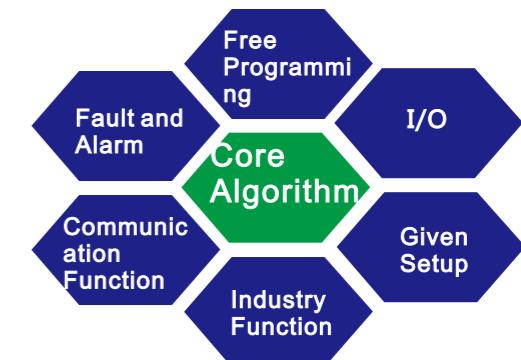

> Standard EMC harmonics filter could reduce the radio and conduction interference to other equipments.

Powerful software function

Open and smart software structure

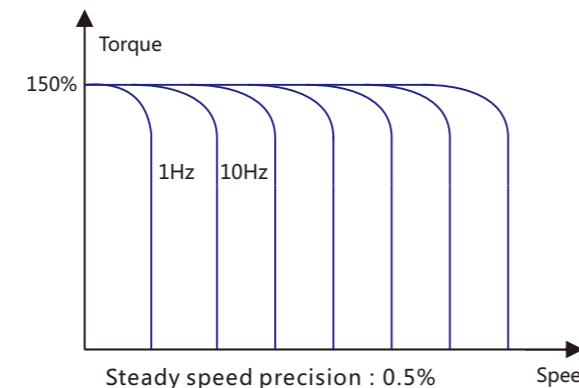

Software system adopts module design. Core control algorithm, communication function and monitor functions are all completed by module design program. Intelligent assistant function could be free programmed by function cells which could be free connected with parameter setup. Through parameter interlink mode, the user could free definite the best speed adjusting system and functions to meet all kinds of application requests.

Powerful software function

> Excellent performance vector control

We adopts advanced flux estimation technology, velocity estimation technology to achieve an excellent performance speed sensorless vector control and realize the best performance of normal motor.

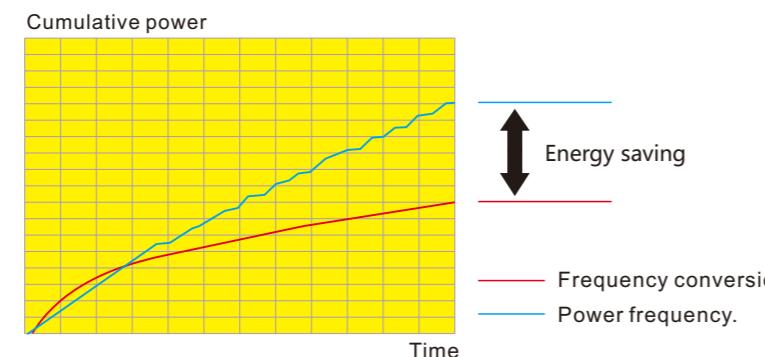

> Powerful automatic functions

Self-learning acceleration & deceleration to automatically agree with all kinds of load.

Automatically adjust carrier frequency based on environment temperature.

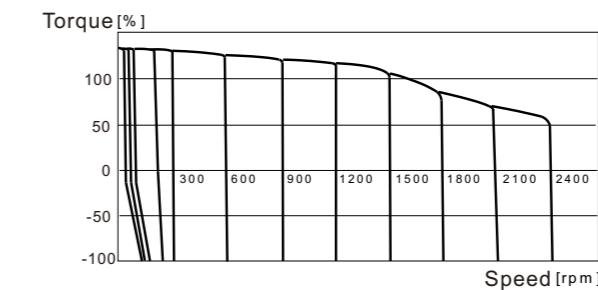

Under energy saving mode, it automatically adjusts voltage and current upon the motor to achieve the evident energy saving effect.

Excellent performance index

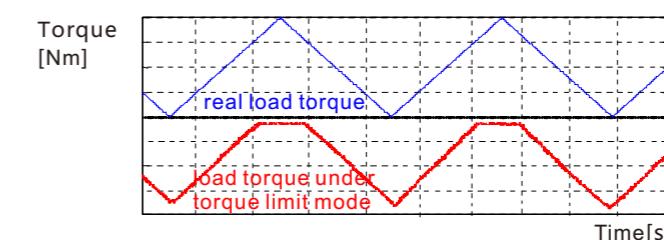

> High torque output

Non PG open loop vector control could achieve 150% torque output at 0.5Hz. And Non PG open loop vector control range could reach 1:200.

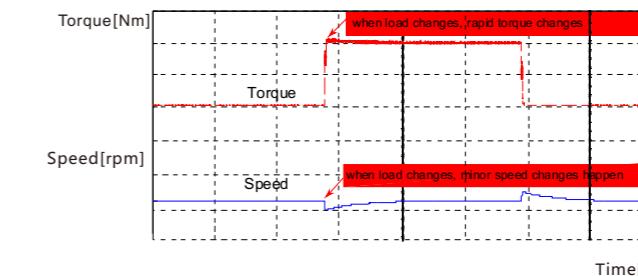

> High accuracy torque control

Non PG open loop vector control: it will limit motor torque output and efficiently avoid mechanical damage caused by torque fluctuation during speed control under $\pm 15\%$ torque limitation mode.

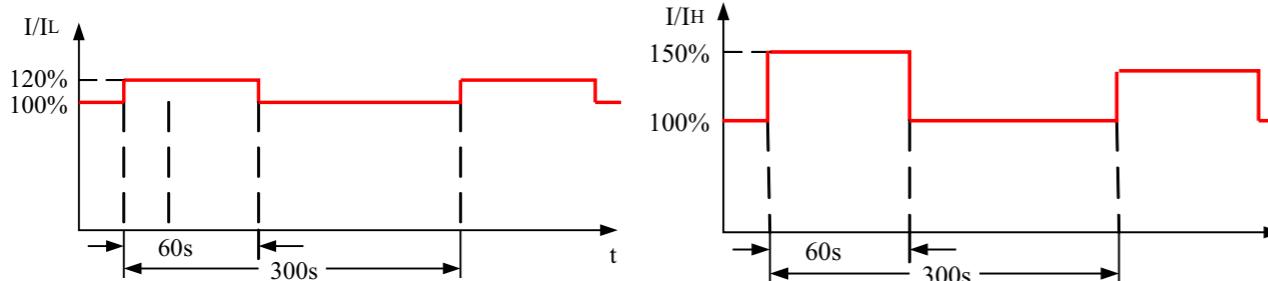

> Quick response performance

Non PG open loop vector control speed band reference value: 50Hz. When the load meets evident fluctuation, the equipment will offer the quickest torque response. When the motor speed fluctuation low down to the least, it could limit the vibration.

Overload Capability

- > QD218 series frequency inverter owns very strong overload capability to adapt cyclical impact load. The overload type could be classified into light load and heavy load. Please see the overload curve in the below.

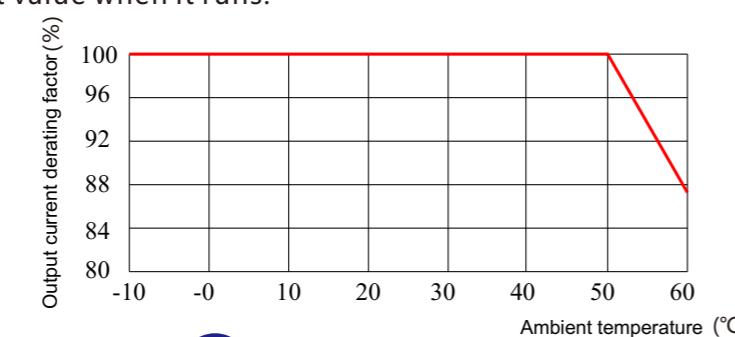

Light load: based on basic load current I_L , it could run 60s with overload 120% and the period is 300s.

Heavy load: based on basic load current, it could run 60s with overload 150% and period is 300s.

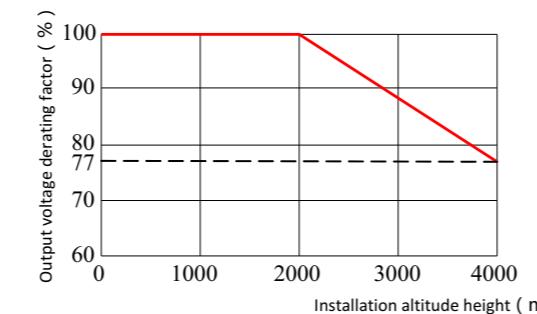

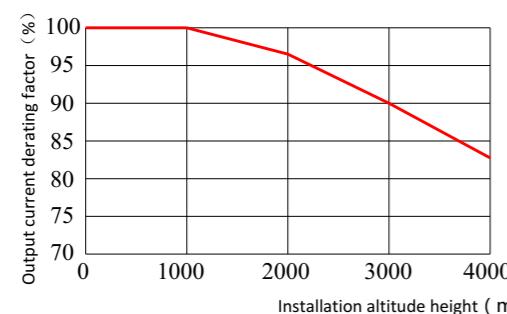

Temperature Derating

- > When QD218 series frequency inverter runs above 50°C, we have to derate the rated output current value when it runs.

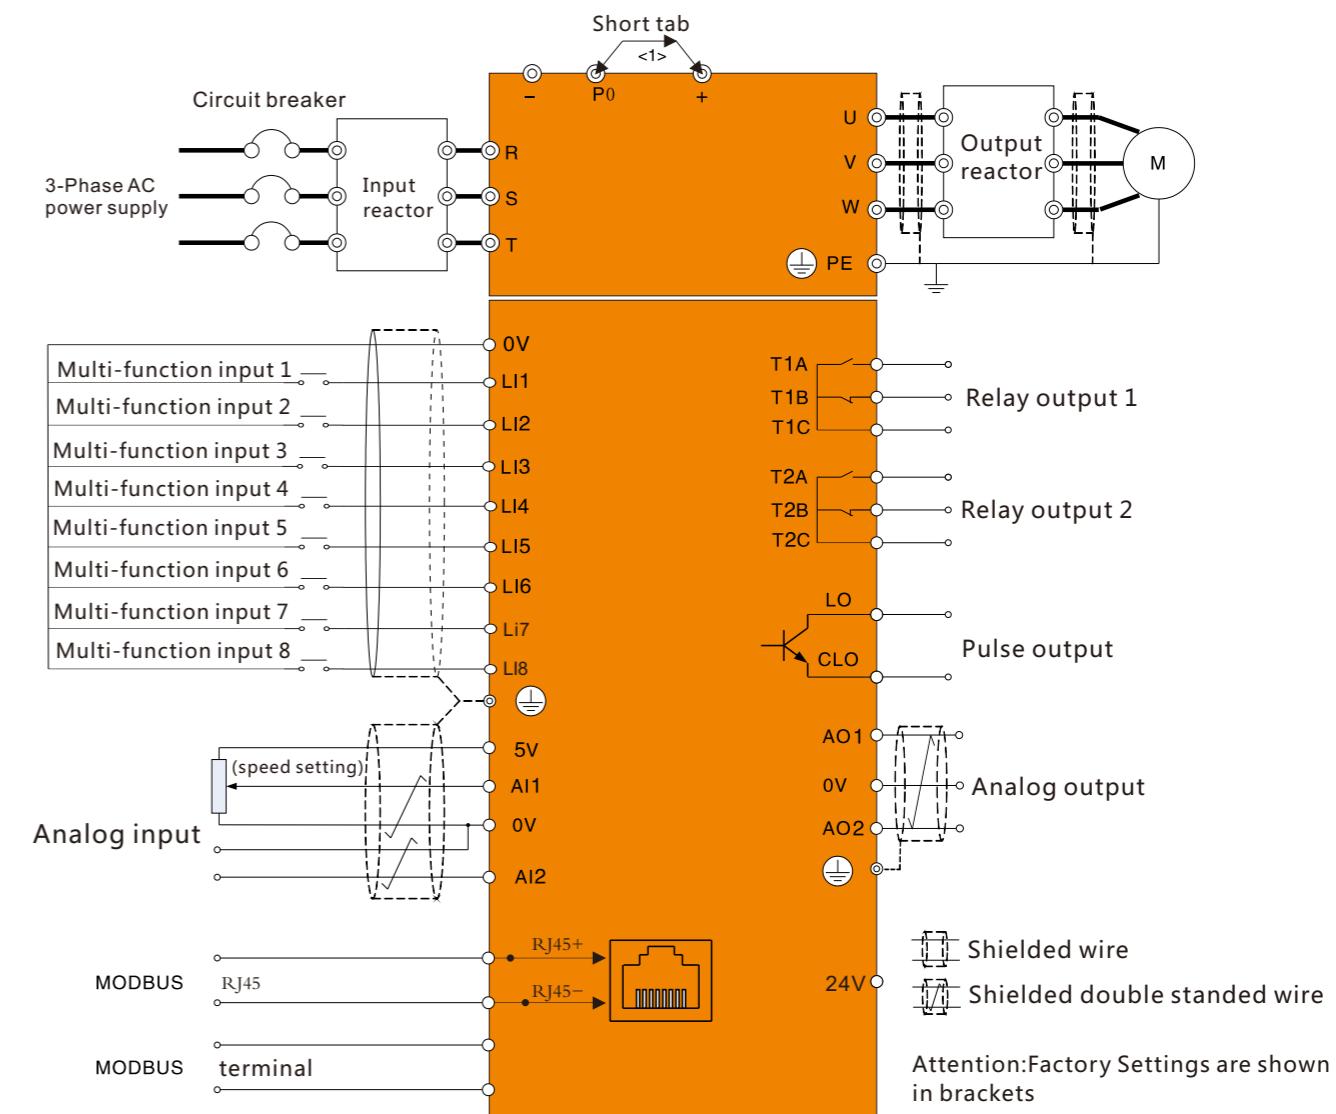

Altitude Derating

- > When QD218 series frequency inverter's installation altitude is above 1000m, we have to derate the rated output current value. When the installation altitude is above 2000m, then we have to derate the rated output voltage.

Electric Connection Drawing

<1> 15~30kw no PO terminal

<2> There is PB terminal for 15-18.5kW. It could connect braking resistor between PB and (+). For the frequency inverter above 37kw (including), please be sure to knock down the jumper between P0 and (+) when installing DC reactor. (Optional accessory)

Technical data ↗

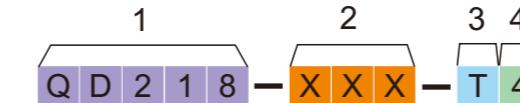

Control circuit data

Available inside power supply	5V	5VDC 5%, maximum current 10mA, it is used for benchmark potentiometer
	24V	24VDC5%, maximum current 100mA, it is used for logic input entrance
Analog input	AI1	Voltage analog input: 0~5 VDC or 0~10 VDC, Impedance is 30k Current analog input: 0/4~20mAADC, impedance is 250Ω Resolution: 10digital A/D switch Factory default set: 0~5 VDC voltage input
	AI2	Voltage analog input: 0~10VDC or PTC probe input Resolution: 10 digital A/D switch
Logic input	LI1-LI8	0~24VDC power supply Positive logic (source) and negative logic (sink) are optional. Factory default set is negative logic. There are 69 functions available such as forward, reverse, run, fault reset, and multi-speed and so on.
Logic input	Mandatory effective input	F309 and F310 are mandatory effective input. It will guarantee the set function effective during powering on.
Analog output	AO1、AO2	Voltage analog output: 0~10VDC, minimum load Impedance is 470Ω Current analog output: 0~20mA, maximum load Impedance is 700Ω Resolution: 8digital Output frequency, output current, given speed, series output date are optional Factory default set: 0~10VDC voltage output
logic output	LO、CLO	Open collector, maximum current 100mA, maximum voltage 30VDC Optional for logic output or pulse output, factory default is logic output Output frequency, output current and given speed are optional
Relay output	T1A、T1B、T1C T2A、T2B、T2C	T1A constant open, T1B constant close, T1C public point/T2A constant open, T2B constant close, T2C public point Touch point capacity: 5A@250VAC, 5A@30VDC There are many functions optional such as fault, alarm and set frequency Only the power above (including) 15kw will have T2A, T2B and T2C.
Series communication		2-way RS-485,MODBUS-RTU,RJ45 connection port

Environmental characteristic data

IP Level	IP20	Ambient/storage temperature	-10 ~ 50°C / -20 ~ 60°C
Cooling method	Forced cooling	Humidity	Below 95RH% (Non -condensation)
Installation area	In room	Altitude	Below 1000m

Normal control mode terminal ↗

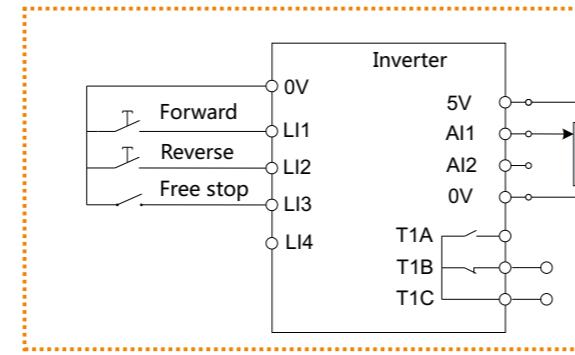

> two-wire control running

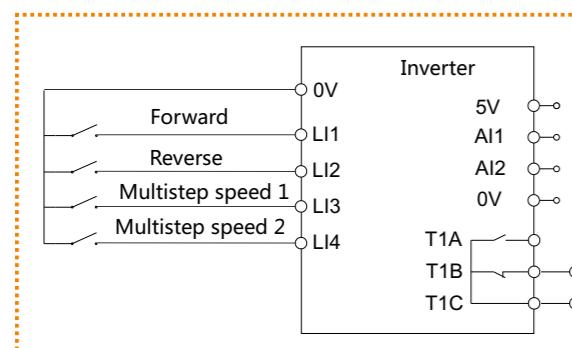

> UP/DOWN acceleration and deceleration(Negative logic)

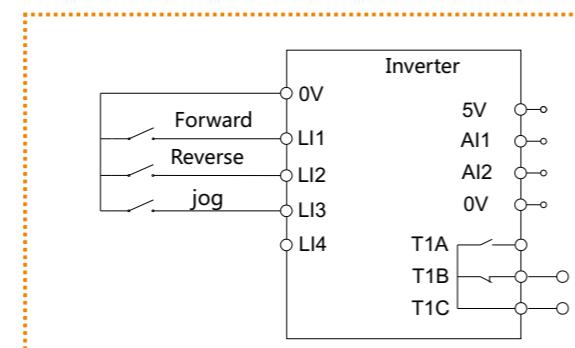

> Three-wire control running
(Negative logic, decelerates to stop)

> Three-wire control running
(Negative logic, motor stops freely)

> Multistep speed control running
(Negative logic)

> Jog control (Negative logic)

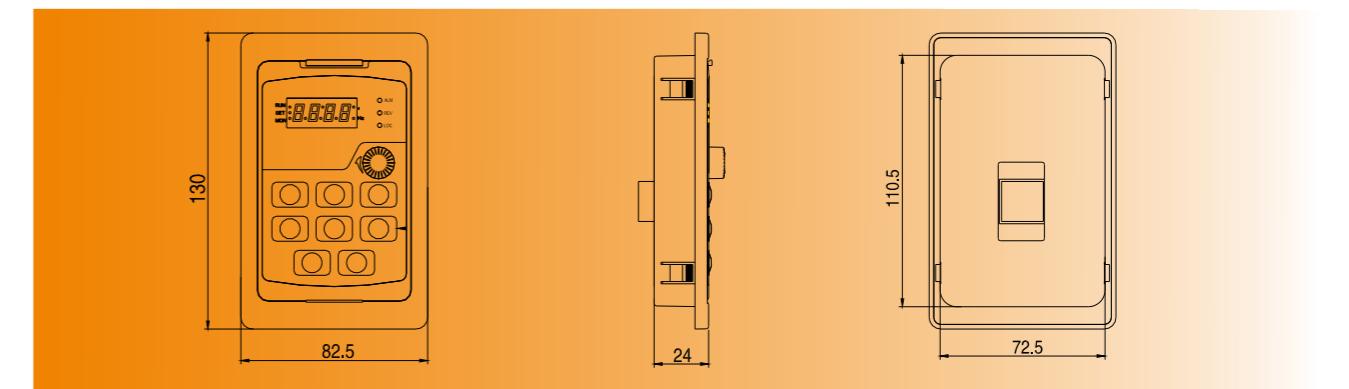

General parts ↗

[The keypad]

The keypad could realize status display, given frequency, parameter setup, start&stop control and also could be pull-out.

When the keypad is used as pull-out keypad, its longest distance could reach 100m. When delivering the goods, we will send one 2m connection cable with RJ45 connector. (unshielded UTP double twisted cable)

Keypad Size

Chinese display keypad

LCD display keypad has the same size to integrated operation keypad.

More clear to display the content with LCD.

Several lines to display the content and meanwhile it could monitor several running parameters.

Intelligent Chinese display, easy to understand

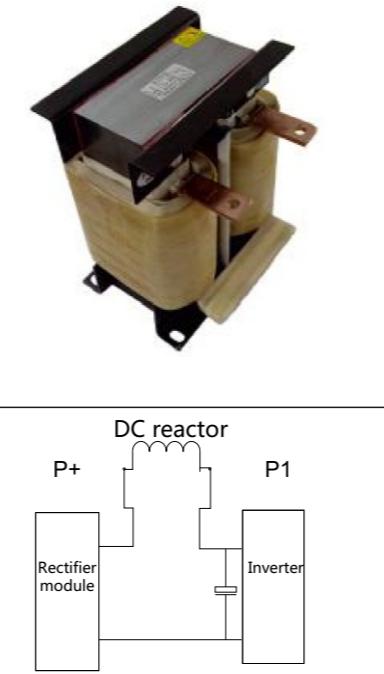

[Braking unit]

- > It is mainly applied to urgent deceleration, braking, position and so on. The unit could realize the braking function by consuming the renewable energy upon power resistor. Through special energy consuming braking control circuit, it could consume the renewable energy upon the resistor to converse into heating energy.

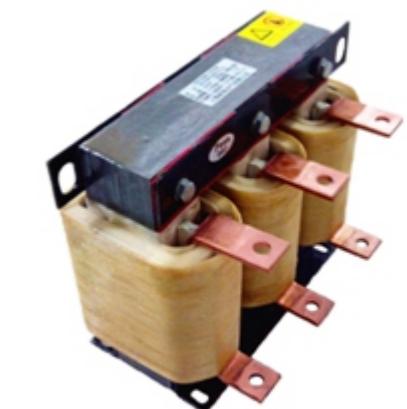

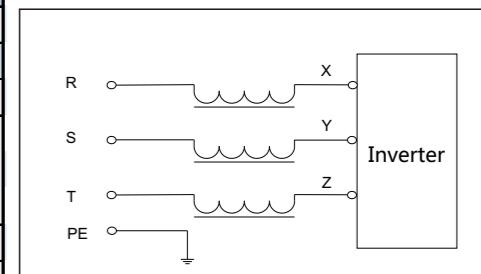

Serial number	Voltage	Model	Sequence
1	440V	QD-CBU4030	30kW and below—50A
2		QD-CBU4045	45kW and below—75A
